GLASTECHNISCHE WERKSTÄTTEN

LAGER CHEMISCHER UND PHYSIKALISCHER APPARATE UND UTENSILIEN.

BRAUNSCHWEIG, den 31. March 1897

Rebenstrasse 13<sup>a</sup>.

Physical Department, Trinity College  
Dublin

Dear Sir!

1127

Having posted to your address, three months back, the 2<sup>nd</sup> supplement for our catalogue (2<sup>nd</sup> edition 94) we beg to call your attention repeatedly to the following apparatus therein enumerated, that have attracted universal interest. From list of December 96:

1. Tubes for cathode-rays after Goldstein (for deflection deformation and coloring powdered salts) -
2. Vacuum vibrator and special tubes after Mc. Farlan Moore -
3. Crookes' tubes with Sidot crystals -

giving the most intensive light, when influenced by the current -

4. Spectrum tubes with Argon and Helium gas and mixture of both - (taken from the springs of Caunterets -
5. Doleval's dry piles - the most powerful ones -
6. Elster and Geitel's improved Tesla Transformer without oil-insulation and the splendid series of vacuum tubes -
7. The best kind of Röntgens tubes No. 2040 & p. of this new list, working better and more constant than any other model -
8. hollow lenses for Tyndall's experiments -

Hoping soon to have the pleasure of your kind news and orders, we remain,  
dear Sir,

yours most respectfully

Louis Müller Unkel,

R. Müller-Uri
