

W. J. Chairman
Buxton Sec.

Admiral
Lammox
Schuster
Lodge
S. P. J.

Yesterday I sent off a
letter to The Times advocating
the teaching of elementary Science in Schools
instead (to a large extent) of Latin,
School House,
Corrie,
Isle of Arran, N. B.

Φ,

10/36

7th Sept.

I want to know where you are, and are going to be
within the next fortnight.

I greatly want to have a talk about Space Telegraphy,
& I am sorry that I was not at Coopers Hill
when you wrote, as we could have tried my apparatus
over the fields.

I did not tell you that my arrangement (in which
a hole only 9 feet high is used) acts over 1½ miles.
As my Induction Coil broke down 6 weeks before
we left, I was obliged to suspend operations.

By the way, if anyone at the B. A. claims ^a
small receiver of electric oscillations in which the brazen
tube is replaced by Carbon and Aluminium, you
may get up and say that such a receiver has
been used by me for the last year.

Now where are you going after the B. A. meeting?

I can be back at Coopers Hill on the 15th.

Could you come and stay then for a few days?

If you can't manage to stay, I could leave this
before that date.

Please send me a telegram ^{on receipt of this} saying what you can do.
The address "Corrie, Isle of Arran" is enough.

M.
