11/27

My dear Prof. Fitz Gerald,
I enclose

The paper (of course etc) which
you so kindly sent me.

I think it is very likely
that that which is "new"
in it is not "true"!

A separation of 10 Aug. must
be too small to form

11/27

and hope to have more
when I return to this
question in September next.

The reliable basis of
any correct conclusion.
For example they rush to
the conclusion that the
magnetic effect is parallel
to the pressure effect while
I found that no such
relation exists. I had a
separation of 1 Ang. unit.

Of course I cannot say
that the "reversed" polarization
is not a fact - but I
have been thinking a good
deal over it & I prefer
for the present to put
it down to bad apparatus,
or bad experiments, or
a vivid imagination.
