

at 1.13. Your getting  
back to Euston will be  
easily provided for.

---

I saw yesterday at the  
R. Instit<sup>n</sup>, Coloured  
Photographs wh<sup>ch</sup> are so  
slight a modification of  
Joly's that I hope the  
process is an infringement  
of his patent. They told  
me they expect to be  
able to sell them for  
3/6 each.

8 Upper Hornsey Rise N.  
1896, Jan<sup>ry</sup> 18<sup>th</sup>.

Dear George 13/26

I have sent  
forward all the  
information in reference  
to Dr Hamilton's bequest.  
The date of your mother's  
death is I think without  
any doubt Oct<sup>ober</sup> 20, 1859.  
This is the date Maurice  
has sent me, & it is  
confirmed by records which

13/26

Bindon has ~~in~~ one in  
Kate's handwriting, the  
other in my mother's.

\_\_\_\_\_ in London  
All your time <sup>seems</sup>  
pre-occupied except Sunday.  
Could you leave your  
traps at Euston & come  
on here, ~~or here~~ either  
by train from King's Cross  
or by Tram & Bus from  
the <sup>north</sup> end of the Tottenham  
Court Road? There are

Morning trains ~~from~~  
on Sundays from King's X  
of which I will send  
you the particulars if  
you can come by one  
of them — which w<sup>d</sup>. be best  
for us —. Then there is  
an interval without trains,  
& the first of the Afternoon  
trains leaves the Focal  
Station of the gr. Northern R.  
at 1.0 pm. getting to  
Crouch End (our Station)

to be present -

Wishing you through  
the ordeal in the  
very best way, &  
with love to Harriette,  
Ever your affectionate  
G. Johnston Stone.

13/26

2

<sup>1</sup>  
3/6 each. Three photos  
are taken through  
~~absorbing~~ coloured glasses  
A.B.C. ~~These~~ The  
positives from these are  
then viewed through  
coloured glasses a.b.c.,  
& by a simple arrangement  
are seen superposed.  
The resultant effect  
seemed very striking,  
but I did not think

13/26

the objects shown —  
a column jar, and  
a box of box-bow —  
any severe test of  
the accuracy or  
delicacy of the process.

Another thing shown  
was the photographed  
shadows of a hand  
exhibiting the bones,  
& of some other objects.

The opinion seemed  
to be that the rays  
by which this was  
accomplished were  
ultra violet rays, but  
I cannot but think  
they must be Hertzyan  
waves.

Many thanks for  
the card for your  
Lecture, at wh. of  
course I will try
