Belair,
Windsor Avenue.

June 27/91

Dear George

I have sent a note to
Prof. Dallas & hope we shall
arrange this.

Could we not cooperate
with the R.D.S. lecturing
arrangements. I am
sure it would help us both
& in getting better men
if they would ^{join us}. Can you
do anything?

When you make a cell
(this is another problem)
Zinc / fused Zinc chloride / fused
Aluminium Sodium Chloride / Aluminium

and find it has an emf
of .47 whereas according
to theory it should have .2
what is to be said about
it? It can hardly
be a thermo effect & a
temperature coefficient of
this kind is unheard of
I fancy. The cell is at
a low red heat.

Yours faithfully
J Brown

Aunt Lucy Keston is very
ill at Edendary with
influenza - we are very
anxious about her on
account of her age and
weak heart and lungs
