I write that date to R. Schuster
asking him to fix after 15 Dec for
grad exams, but I have not heard
in reply.

As to the Phys Soc it is merely a nucleus to
gather together the few persons in Liverpool who
can do Physic. On occasions we have
had 600 but usually about 16.

No need to take trouble & give a formal communication
but if you could give us a talk about something
it would be appreciated. Anything you have on
hand at the time would do.

Do anything further known about the death
of the Bp. of Kells & his wife?

As told it looks as if there might have
been some sort of telepathy. assuming the
coincidence, but I suppose nothing
will be known?

1

I see you suggest that the friction between air & a liquid
may depend on whether the liquid evaporates or not.
Hence the effect of oil on water perhaps, *Armenian*
seawater there can hardly be shearing in the thin film which is effective
in joining the water to wind.
