I fear that if you permit your linear drawings first it  
will be information ~~sent~~ to Marconi (ie to Preece, for I  
doubt how much Marconi has to do with it now. Minchin tells  
me that Marconi has been paid <sup>by the syndicate</sup> fifteen thousand pounds  
down in cash and £35000 in shares.  
Nothing like a sealed box to take the world's public!  
It's a lesson in the management of J. Sambpe facts.

Publication at the Roy Soc is useless.

He seems to have longer "nature". For any letter on the subject to that  
hope is suppressed, probably after submission to Preece.  
I have found it so, & now I expect Minchin is sending the  
same. So I had to send a note to Phil Mag instead, because  
Warburg & others were being misled.

I am very sorry that Kealey. I think that it happened. All Mrs. Moore's faith was just  
beginning to be shaken, by certain events that had happened, & that she  
was anxious to get information & than the thing settled, for her own  
peace of mind. So I got from letters to my wife, with whom she is friendly.  
She reproaches herself now with selfish motives, which have been justly rebuked.  
Yours ever JH

I am rather glad Michie is on the warpath too.

I fear the one patent is late in the day - its a  
disrupting system, & the whole Marconi episode is very  
annoying. "brought to England a new plan"

that is the Preecean keynote.

I know well that the spread out condenser is the thing  
I have been long for by capacitors, but still I have  
especially gone for is the resonance. This I have got  
but my patent is not completed yet.

Send on early rough sketch  
but dont pass it on.  
and it look

Yes I connected to gas pipes re long ago, & showed  
them the result to local Phys Soc & , but cant  
remember what I was published. I have been very  
lazy about publishing - this matter I regret to say. That

"work of Hertz" was of an expanded lecture, & the  
illustration are mostly thumbnail sketches for Editor of an  
Electrician

When published - I got the  
reputation for a highly paid - Hertz  
was produced - cloud & work with the plates
