Dear Prof. Fitzgerald,

Many thanks  
for your letter and the titles.

As to the date, I think  
you would have a better audience  
on the 18th; as a rule Saturday  
evening meetings are not successful,  
and especially about Christmas-time.

Concerning the subject -  
personally I should like 'Vortices',  
but I am inclined to your  
opinion that "Flying" would be

more attractive to the public. We must leave the choice to you; if there is anything we can do in the way of preparing experiments - so that you could give the 'Vortices' lecture on the Friday - please let us know.

If you choose 'Flying', have you the slides prepared, or shall we make them for you? I have the two copies of 'Nature' with Lilienthal's pictures, and they can soon be copied.

One of the B.Sc. candidates (Fraser) enquires whether you would like to see the Note Books of his Practical Work. If so, it can be sent with the Practical Examination Papers.

23/34

Yours sincerely,  
James L. Howard
