

THE UNIVERSITY,
GLASGOW.

23/90

5th Nov. 1898

Dear Fitzgerald

My

suggestion of the multiple
cameras may certainly
be dropped from the Report,
because I see that Mr.
Brown's addition of a
fixed camera to Sir
Frederick Bramwell's
proposal attains the

object not only more
simply but better.

I am glad to hear
you have been repeating
Hertz's experiments. I
think we are surely
on the point of learning
much more of electro-
magnetic waves and
electrostatic waves? than
could even be imagined
some time ago.

With kind regards from
Lady Thomson remain
Yours W Thomson
