ST JOHN'S COLLEGE,
CAMBRIDGE.

April 29. 1895

My dear FitzGerald

I have now written out
what I have got to say about
elections, and after typewriting it
I propose to send it to the R. S. as
a second paper. I am afraid I
run a risk of prumbling, at
least, from its length, as it
may run to 40 pages quarto: but I
think I had better risk it.

I have posted your specimen
to show that there is no tension

part in the Electrodynamie force.

The electron method involving
(F, G, H) is now extended to ^{the} cases in
which the velocity of electrons
may be of any magnitude.

I am getting a trifle tired
of it. it is such a bore writing
things out.

I see you have been flying
and are going to fly again for
charity's sake. More power to you.

Yours ever sincerely

Harmon
