Dear Sir -

I should much like to hear more about the patents you mention as should experiments be necessary I have considerable facilities here for carrying them out.

Excuse my not having sent off this letter before - I have been away at Cambridge &c since I commenced it.

Mrs Ayrton is away in Paris to pass her test exam: for M.D or otherwise would, I am sure, send you her kind regards

I have been working much on the waves with the chronograph - The explanation has I think now nothing to do with electromagnetic induction - Have studied the article of Thomson's you were so kind as to refer me to. As I am not absolute-ly sure of the explanation and as the experiments are lengthy by which I have arrived at what I believe to be the explanation I will postpone until I am quite sure before troubling you with the details

Believe me with kindest regards

Very truly Yours
W. E. Ayrton
