

27/24 A notice of the principle of ~~the~~ a chromatic stereoscope  
was communicated by Sir David Brewster to the Physical  
Section of the British Association at Swansea in 1848. See  
Report of the Association and Phil. Mag. January 1852, P 31.

My dear Francis.

You must manage to put the above as  
a foot note to the <sup>1st</sup> page of the Report of Doves enquired.  
— You may choose the place of the star — after the words  
"ingenious inventor" it might appropriately ~~and~~ be  
placed — or perhaps in the title — the place  
is of not much importance so as the note  
appears.

Yours truly

Hyndall
