Dear Prof. Fitzgerald

Is there enough given  
of the calc. of stress in the  
enclond? It need not of  
course be very full for any  
one able to go into the matter  
will be able to supply connecting  
links - but ~~is~~ the statement  
that the elementary ring is  
assumed 1 c.m. deep is sufficient.  
I suppose, to convey that the stress  
calculated is the stress per <sup>square</sup> ~~cm~~  
cm?

Please look over it for me.

I find Oedhann's newspaper

3/18.

articles really very interesting -  
and I think very true - I  
must show them to you.

Yours very truly

J. Joly.
