6/6

My dear Fitzgerald,

Have your papers on the communication of vibrations to the ether been printed yet? I have looked a little into the matter recently and think you ought to be able to start vibrations without much difficulty. I think you sent me a separate copy of your paper on the electro-magnetic theory of light, but I must have mislaid it. if you got another copy to spare I should be much obliged. Will you be at Southport this year, and at Montreal next? Yours very truly

W. M. Schuster

Then address above, if any, to the Owens College as
I shall be leaving here this week.
