

LISNABIN,

DARTRY PARK ROAD,

RATHGAR.

6/69

April 18th 1897.

My dear Fitzgerald,

Is it possible that
you may be at the College on
Tuesday? If so could you
spare me a few minutes to
conversation on some results
I have just arrived at bearing
on the constitution of solids.
By a new train of thought

I have arrived at some molecular structures, which when tested by Gladstone & Dale's law come out beautifully exact. But what I fancy is the best thing - I can explain to a nicety what happens in the freezing of water.

If you should agree in thinking my reasoning sound it will mean a great advance in the knowledge of crystalline structure.

6/69

I am ashamed to be troubling you out of due season, but I know if you can help me you will.

Sincerely yours
W. J. Sollas
